

Dear Hiring Manager,

I am writing to express my interest in opportunities at Sigmoid. With a strong background across data analytics, data engineering, and software development, I bring a versatile technical profile that allows me to contribute effectively in fast-moving, data-driven environments.

My experience includes hands-on work with SQL, Python, ETL pipelines, data modeling, dashboarding, and data validation, along with exposure to Looker, LookML, Power BI, Tableau, BigQuery, DBT, and Fivetran. I have also worked on analytical and engineering projects that strengthened my ability to build reliable data solutions, derive meaningful insights, and support business decision-making. In addition, my development experience with Flask, React, Node.js, MongoDB, and web technologies has helped me build a solid full-stack foundation.

I am also familiar with modern work practices centered around agentic AI, rapid iteration, and collaborative development. I value environments where teams use automation, intelligent tools, and strong engineering discipline to move faster while maintaining quality and ownership. That mindset aligns well with how I like to work and continue growing.

I am particularly drawn to roles where I can combine problem-solving, analytical thinking, and technical execution to deliver measurable business impact. I adapt quickly, learn continuously, and take ownership of my work with a strong focus on quality and deadlines. I believe this approach, along with my practical experience, would allow me to contribute meaningfully to Sigmoid's teams and client engagements.

I would welcome the opportunity to discuss how my background aligns with your current openings.

Sincerely,
Shivek
